EXPERIENCE

Octane5 International, LLC | Full-Stack Developer (Python/Django)

January 2019 – Current | Atlanta, GA

- Improved a legacy product design Submittals and Approvals Library application by making the code more efficient and adding new features that gave our clients more insight into the submitted and approved designs.
- Managed multiple 13+ story points (our story points are based on complexity - Fibonacci sequence) with little supervision.
- Reviewed large pull requests, expanded our legacy code-base, and minimized bugs in the system.
- Large Company Project Involvement:
 - *Ordering Application*: A custom ordering system for our clients (e.g. Penguin, FIFA, Harley Davidson) to order our tags and labels based on multiple criteria set up by the brands.
 - Implemented a new ordering system that included Stripe payments, ShipEngine API, backend (Django) set-up, frontend functionality (HTML, JS), and database architecture, which resulted in a more user-friendly and efficient platform.
 - *Flow Application*: A system that enables our clients (e.g. Coca Cola, Caterpillar, Mattel) to build customized workflows with their licensees, such as contracts, applications, and amendments.
 - Collaborated on a four person team to design, architect, and implement a workflow engine that provided our customers with a more dynamic and efficient solution.
 - Provided a No-Code solution for our customer service team that allows them to implement details such as how fields are displayed in a form, privacy features, and events that need to happen throughout the workflow.
 - Trained our customer service team to create customized workflows for our clients through the Django admin.

Ryan, LLC | Senior Consultant

May 2015 – January 2019 | Houston, TX

- Compiled, reviewed, and consolidated financial data to maximize savings for the client and improve audit assessments.
- Improved the capacity of our team to take on more projects and generate more revenue by managing additional client engagements and implementing enhanced data analysis procedures.
- Managed multiple staff members and trained them on data management and analysis to improve operational efficiency for the team.

Ryan, LLC | Consultant

January 2013 - May 2015 | Houston, TX

- Generated over \$8 million of savings for clients by analyzing extracted data, researching state tax laws, and creating complex databases and tax models that helped recalculate the client's net taxable value.
- Increased by 50% our team's overall return on investment through the development of databases to achieve our goals and get faster results without hindering the quality of service.
- Assisted with our department's business development by analyzing the strategic operations of prospective clients and developed comprehensive reports, which led to the discovery of \$12 million in potential savings.

SKILLS

Programming Languages: Python | JavaScript | SQL | HTML/CSS

Libraries and Frameworks: Django | Django Templates | Tornado | Jinja | Bootstrap | jQuery | Express | React | Redux

Other: Django ORM | Microsoft Access | Microsoft Excel | Linux | Git | Github | Bitbucket | Jira

Languages: Bilingual Spanish-English

EDUCATION AND CERTIFICATION

University of Florida

Bachelor of Science in Business Administration: Finance

May 2012 | Gainesville, FL

DigitalCrafts

Full Stack Flex 24-week Program, Software Development

August 2018 | Houston, TX
